VISIT US AT BOOTH 1151

This is intended for US Health Care Professionals.

LEARNING OBJECTIVES

- Recognize the diverse manifestations of Sjögren’s disease, from sicca to systemic organ involvement
- Assess systemic signs and their impact on patient management
- Apply the “sicca plus” framework to identify patients who may benefit from biologic therapy
- Understand the critical role of B cells, where perpetual activation drives a pathological cycle of immune activation, leading to chronic inflammation and irreversible tissue destruction

This program is developed and offered by Novartis Pharmaceuticals Corporation. This is not an official program of the American College of Rheumatology (ACR). This session will be conducted during ACR Convergence 2025.
